

INNOVATION. AUTOMATION. ANALYTICS

# **PROJECT ON** **Employee Management System**

**Presented By:**  
**Jahnvi Sadula**  
**Nihith Gone**

# Agenda

- **Business Problem Statement**
- **Objective of the Project**
- **Schema explanation**
- **ER Diagram**
- **SQL query results with screenshots**
- **Final business insights and recommendations**
- **Challenges working on SQL**
- **Conclusion**

# Business Problem Statement

The Employee Management System (EMS) is designed to efficiently manage employee information, job roles, departments, payroll, qualifications, and leave records within an organization. The system ensures data integrity through relational tables using foreign keys and cascading actions. It also supports analytical queries to provide insights into workforce distribution, salaries, bonuses, leave patterns, and payroll expenses—streamlining HR operations and decision-making.

# Objective of the Project

The objective of the Employee Management System project is to design a structured SQL-based system that efficiently manages employee data, job roles, salary details, qualifications, leave records, and payroll processing. The project aims to build a relational database that ensures data accuracy, supports analytical queries, and helps organizations generate useful insights for HR and management decision-making.

The database contains **six interconnected tables**, each performing a specific function:

**JobDepartment**

Stores job roles, departments, and descriptions.

**SalaryBonus**

Contains salary, bonus, and annual pay for each job role.

**Employee**

Holds employee personal information, contact details, and job assignment.

**Qualification**

Maintains qualification, skills, and requirements for each employee's position.

**Leaves**

Tracks employee leave details such as date and reason.

**Payroll**

Combines employee, job, salary, and leave data to calculate final payments.

**Foreign Key Relationships**

The tables are connected using foreign keys with **CASCADE** and **SET NULL** rules to maintain data integrity.

## Job Department

Job_ID	jobdept	name	description	salaryrange
1	Operations	Operations Engineer	Responsible for engineer duties in the operation...	\$70889 - \$91502
2	Finance	Finance Consultant	Responsible for consultant duties in the finance ...	\$45757 - \$102274
3	IT	IT Coordinator	Responsible for coordinator duties in the IT dep...	\$32637 - \$118326
4	Marketing	Marketing Engineer	Responsible for engineer duties in the marketin...	\$48936 - \$145464
5	Finance	Finance Specialist	Responsible for specialist duties in the finance d...	\$67562 - \$99403
6	Engineering	Engineering Executive	Responsible for executive duties in the enginee...	\$66000 - \$125000
7	Sales	Sales Manager	Responsible for managing the sales department.	\$75000 - \$130000
8	IT	IT Analyst	Responsible for analyzing IT systems in the IT d...	\$48000 - \$92000
9	HR	HR Manager	Responsible for managing the human resources ...	\$68000 - \$105000
10	Operations	Operations Specialist	Responsible for specialist duties in the operatio...	\$54000 - \$90000
11	Marketing	Marketing Coordinator	Responsible for coordinating marketing campaig...	\$55000 - \$95000

## Salary Bonus

salary_ID	Job_ID	amount	annual	bonus
1	1	45000.00	540000.00	5000.00
2	2	55000.00	660000.00	7000.00
3	3	40000.00	480000.00	4000.00
4	4	48000.00	576000.00	6000.00
5	5	47000.00	564000.00	4500.00
6	6	65000.00	780000.00	10000.00
7	7	80000.00	960000.00	12000.00
8	8	42000.00	504000.00	3500.00
9	9	55000.00	660000.00	7000.00
10	10	48000.00	576000.00	5500.00

## Employee

emp_ID	firstname	lastname	gender	age	contact_add	emp_email	emp_pass	Job_ID
1	John	Doe	M	30	123 Elm St, NY	john.doe@example.com	password123	1
2	Jane	Smith	F	28	456 Maple Ave, CA	jane.smith@example.com	password123	2
3	Alice	Brown	F	35	789 Oak St, TX	alice.brown@example.com	password123	3
4	Bob	Johnson	M	40	101 Pine St, FL	bob.johnson@example.com	password123	4

# ER Diagram & Schema Explanation

# Key Analysis Questions

How many unique employees are currently in the system?

```
select count(*) as Total_employees from employee;
```

Result Grid		Filter Rows:
	Total_employees	
▶	60	

# Which departments have the highest number of employees?

```
SELECT j.jobdept AS department,  
       COUNT(emp_ID) AS employee_count  
FROM employee e  
INNER JOIN jobdepartment j  
ON e.job_ID = j.JOB_id  
GROUP BY j.jobdept  
ORDER BY employee_count DESC  
LIMIT 5;
```

department	employee_count
Finance	9
IT	9
Operations	8
Marketing	8
Engineering	7

# What is the average salary per department?

```
SELECT j.jobdept AS department,  
       ROUND(AVG(s.amount), 0) AS average_annual_salary  
FROM jobdepartment j  
INNER JOIN salarybonus s  
ON s.Job_ID = j.Job_ID  
GROUP BY j.jobdept;
```

department	average_annual_salary
Operations	68750
Finance	72333
IT	70889
Marketing	65625
Engineering	81143
Sales	75429
HR	62571
Legal	84600

# Who are the top 5 highest-paid employees?

```
SELECT Emp_id, FirstName, LastName, Salary
FROM (
    SELECT e.emp_ID AS Emp_ID,
           e.firstname AS FirstName,
           e.lastname AS LastName,
           s.amount AS Salary,
           DENSE_RANK() OVER(ORDER BY s.amount DESC) AS RNK
    FROM employee e
    INNER JOIN salarybonus s
    ON e.Job_ID = s.Job_ID
) SUB
WHERE RNK <= 5;
```

Emp_id	FirstName	LastName	Salary
37	Ingrid	Adams	170000.00
38	John	Baker	160000.00
35	Grake	Moor	150000.00
36	Hank	Wilson	150000.00
39	Kelly	Cooper	140000.00
34	Frank	Davis	135000.00

# What is the total salary expenditure across the company?

```
SELECT ROUND(SUM(annual + bonus)) AS total_salary_expenditure  
FROM salarybonus;
```

total_salary_expenditure
52482700

# Which employees have taken the most leaves?

```
SELECT e.emp_ID,  
       e.firstname,  
       e.lastname,  
       COUNT(l.leave_ID) AS total_leave_days  
FROM employee e  
JOIN leaves l ON e.emp_ID = l.emp_ID  
GROUP BY e.emp_ID, e.firstname, e.lastname  
ORDER BY total_leave_days DESC  
LIMIT 5;
```

emp_ID	firstname	lastname	total_leave_days
1	John	Doe	1
2	Jane	Smith	1
3	Alice	Brown	1
4	Bob	Johnson	1
5	Charlie	Williams	1

# Final Business Insights & Recommendations

## Key Insights

- Departments with more employees tend to have higher salary expenditure.
- Certain job roles offer higher salaries and bonuses, influencing employee retention.
- Leave patterns reveal workload stress or seasonal trends.
- Payroll variations reflect bonuses, leave deductions, and job hierarchy.

## Recommendations

- Optimize resource allocation in departments with high salary expenditure.
- Offer training programs for roles requiring high qualifications.
- Implement better leave management practices to reduce productivity impact.
- Automate payroll to minimize manual errors and speed up processing.

# Challenges Working on SQL Project

- Designing the ER diagram and establishing correct foreign key connections was challenging initially.
- Writing multi-table JOIN queries required understanding relationships between tables.
- Ensuring data consistency during inserts, updates, and deletes needed careful planning.
- Handling date formats and generating time-based insights took additional effort.
- Overall, the project improved my SQL understanding, query optimization skills, and analytical thinking.

# Conclusion

The Employee Management System successfully demonstrates how SQL can organize and analyze large employee datasets. Through ER modeling, structured tables, and complex queries, the system provides valuable insights for HR decision-making, salary planning, and performance tracking. The project highlights the importance of relational databases in efficient workforce management.

THANK  
YOU
